PÜR SPAS

CHANGING THE MODES ON THE SPA

FOR BALBOA VS300 EQUIPMENT

Below, you will find the three operating modes of your spa that affect the heating and therefore the energy consumption.

Mode is changed by pressing "**WARM**" then "**LIGHT**".

STANDARD MODE

It maintains set temperature. Code "**ST**" will be displayed momentarily when you switch into Standard Mode.

ECONOMY MODE

It heats the spa to the set temperature only during filter cycles. Code "**EC**" will display when water temp is not current, and will alternate with water temp when the pump is running.

SLEEP MODE

It heats the spa to within 10°C (20°F) of the set temperature only during filter cycles. Code "**SL**" will display when water temp is not current, and will alternate with water temp when the pump is running.
