In order to change the casing of a defective GFCI plug, follow these steps:
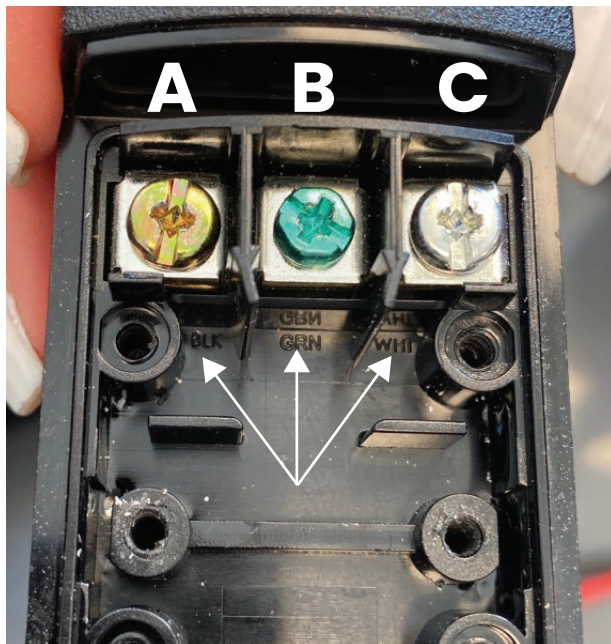

REQUIRED PARTS

You will need:

- New GFCI plug
- A screwdriver

Parts are available from your local retailer.

1   Make sure that the length of the drawn wire matches the illustration:

2 The wires have a specific position according to their color:

    A. The yellow screw - black/blk
    B. The green screw - green/grn
   **C.** The silver screw -white/wht

3 Place one wire at a time in its position, according to the color.

**Be careful**, each wire must be insertedto the very bottom;

4 Tighten each screw;

5 Add the metal plate and screw. Make sure to put it on the right side as above:

6 Make sure the small pad is placed against the panel and close the plug;
