

HOW TO ACTIVATE THE LIGHTS ONLY FEATURE

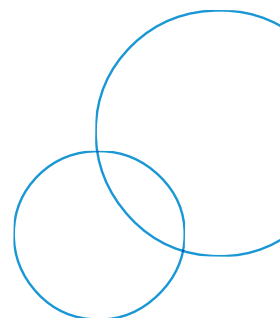

FOR YOUR IN-STORE SPA DEMO

If you want to only activate the lights on your demo spa, here is a quick way to turn off the heater and pump.

- 1 Be sure to unplug the spa;
- 2 Open the outside panel of the spa and get to the spa pack;
- 3 Open the spa pack;

- 4 Remove the connector plugged into the circuit board and finger-tighten the tabs on either side of the white end cap to remove it easily (pump connection);

- 5 Unscrew the bolts from the two copper pins connecting the heater to the board.

Be careful not to force them too much so you not bend the pins or break the sensors which are fixed in the heater;

- 6 Put the bolts to the bottom of the spa pack with electrical tape and add a note to put things back in place before selling the spa to a customer. The person reconnecting the spa must be able to find the bolts easily!
- 7 Close the spa pack door and the outside panel of the spa;
- 8 Plug in the spa and now only the lights will come on.
