

ADDITIONAL INSULATION OF SPA : HOW-TO ON IMPROVING ENERGY PERFORMANCE

To improve the energy performance of your spa, we suggest adding 16" **Roxul Rockwool SAFE'n'SOUND** insulation.

1. Open every door on your spa.
2. Open the thermolayer (aluminium foil) protecting the underside of your spa.
3. Put insulation all around the inside space, **except the side that houses the spa pack, the pump and the heater** (under the thermolayer).
4. Close back the thermolayer and put back the doors.

IMPORTANT

Putting insulation around the spa pack, heater, and pump will cause **overheating** in summer and hot temperature.

INSULATION BY SPA MODEL

- **Spartan:** 1 bag of Roxul SAFE'n'SOUND
- **Feeling:** 1 bag of Roxul SAFE'n'SOUND
- **Orion:** 2 bags of Roxul SAFE'n'SOUND
